

R554DY005

Systema
Radiante

Racor intermedio co purgador, descarga y termómetro 1"

► Especificaciones de producto

R554DY005

Dimensiones: 1"

Racor intermedio para colector con autojunta.

Formado por:

- Purgador automático de aire.
- Grifo de carga/descarga.
- Termómetro de contacto con esfera de Ø40mm, escala 0÷80°C.
- Tapón terminal.

Rango de temperatura 5÷110°C.

Presión máxima de trabajo: 10bar

Presión máxima para purga en R88l (7bar).

R554D

Description

Intermediate group for manifolds, in brass, with self-sealing.
Provided with: automatic air vent valve (R88), drain tap (R608), thermometer (R540), terminal plug (R592D).
Suitable for heating and cooling systems, with water and glycol solutions.

Versions and product codes

Product code	Connections
R554DY005	1"
R554DY006	1 1/4"

Technical data

- Temperature range: 5÷110 °C
- Maximum working pressure: 10 bar
- Maximum pressure of air vent operation: 7 bar (R88)
- Terminal plug: 1" M (R592D)
- Plug: 1/2" M (R92)
- Thermometer: 3/8", Ø 40 mm, range 0÷80 °C (R540)
- Drain tap: 1/2", with hose connection (R608)

Materials

- Body, plugs and drain tap: UNI EN 12165 CW617N brass
- Gaskets: EPDM
- Body (R88): ottone UNI EN 12165 CW617N
- O-Ring (R88): EPDM
- Shutter spring (R88): inox
- Internal float (R88): PP-H

Performance

The table and the graph report the air capacities in discharge, in standard conditions at the change of the relative pressure of the system.

Operation

The operation of the automatic air vent valve is based on the principle of the floating of bodies immersed in a fluid. When there is no air accumulation into the valve body, the float is in raised position and through the mechanism, it keeps the obturator under closing.

The lowering of the floating level caused by the air accumulation into the valve body, involves the obturator opening and the consequent discharge that persists up to the reintroduction of the initial conditions. At the system load, as there is no water into the valve body, the float is completely down permitting to the air to flow quickly.

The air discharge is prevented by screwing the lateral plug.

In normal operation conditions, the plug shall be unscrewed.

Installation

The R554D group is usually installed on the manifolds. It must be put in vertical position, with the plug facing upwards. The installation is advisable in places that can be easily inspected.

Warning.

Close the cap of the air vent valve when rinsing out and filling the system, to prevent impurities from entering the mechanisms of the valve and damaging it.

Example of installation with the manifold
